

ABSTRACT

1 A display security system including a display device and
2 a key FOB. The display device includes an electrical
3 display, a file with encrypted information, a system for
4 displaying the encrypted information on the display, and
5 a decryption key receiver. The key FOB is adapted to
6 transmit a description key to the decryption key receiver
7 of the display device. The display device is adapted to
8 display the encrypted information on the display in a
9 decrypted form when the receiver receives the decryption
10 key from the key FOB. The display device is adapted to
11 not display the encrypted information on the display in a
12 decrypted form when the receiver does not receive the
13 decryption key from the key FOB.
